

Converged Security + Information Management

ENVIRONMENT

A solid approach to risk management requires that organizations are prepared to respond to a variety of different scenarios: theft, civil disturbance, cyber-attack, pandemics, natural disasters and intellectual property theft. It can be challenging for organizations to calculate in advance the financial impact associated with loss of productivity, loss of customer business, legal fees and reputational damage, but one thing is for sure: a poorly managed crisis event will cost dramatically more. Leaders must prepare and plan for how they will protect their employees and their business and respond quickly if they find themselves in the eye of a storm. Organizations that focus on building resilience and getting their operations back to a “known good state” will be able to weather the types of cascading consequences that can accompany a major crisis.

SECURITY CHALLENGES:

- Monitor internal vulnerabilities and external threats
- Maintain global situational awareness of people and assets
- See and correlate relevant risks
- Generate timely and accurate reports

VIDSYS SOLUTION

Vidsys is a rapidly deployable, browser-based platform collects, correlates and converts vast amounts of data into meaningful and actionable information, based on the organization’s risk policy, standards and compliance requirements.

Vidsys software enables decision makers from a single organization or multiple entities – however geographically dispersed – to manage risk in real time. By leveraging mobile and web-based technology, the software can be rapidly deployed and provides real-time situational awareness and information management capabilities to remote users and first responders.

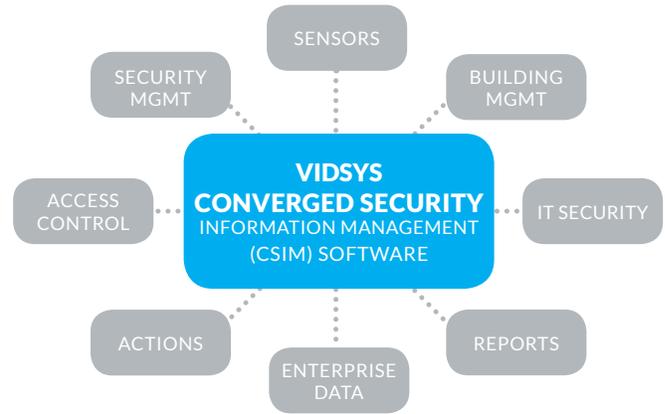

Because Vidsys uses open architecture it can integrate to any system or product. Vidsys software meets all US federal information assurance requirements.

BENEFITS

- Manage geographically dispersed assets from a single location
- Improve response times
- Improve collaboration and resource sharing
- Facilitate interoperability
- Integrate to virtually any system
- Generate tangible ROI
- Extend technology investment lifecycle

HOLISTIC SECURITY AND RISK MANAGEMENT

- Commercial-off-the-shelf (COTS) software
- Open architecture – integrates any system or product
- Rapidly deployable, browser-based client
- Meets US federal information assurance requirements
- Mobile and Scalable

HOW IT WORKS

Vidsys software has a rules engine and work flow tools that give end users the ability to pre-determine what data should be correlated and what should be filtered out. For example, from a video analytics alert, a command center operator can be instantaneously presented with the exact location of a potential security breach and surrounding assets on a map, along with step-by-step instructions for evaluation and resolution. This includes pushing crucial information such as video camera views through a mobile interface to a responding officer. The dynamic reporting feature can generate detailed reports for after action analysis or as part of a forensic record.

Vidsys creates efficiencies for its commercial enterprise clients. Vidsys software enabled a global technology company concerned about intellectual property theft to maintain its security force head count even though it doubled the size of its physical campus during the last five years. This company realized a 66% reduction in response time and a 50% reduction in false alarms from access control systems.
