

Converged Security + Information Management

ENVIRONMENT

The facilities that house the departments and agencies of our federal government are attractive targets for both criminals and terrorists. At both home and abroad, assuring the safety and security of these assets and the people who work in them continues to receive greater and greater scrutiny. Implementing Vidsys software can improve overall interoperability, increase situational awareness and enhance security, emergency preparedness and response. Ultimately, Vidsys software is a valuable tool designed to help security professionals in the government space mitigate risks across their security enterprise.

SECURITY CHALLENGES:

- Controlling disparate systems and sensors
- Preventing access to unauthorized areas
- Achieving real-time visibility to operational malfunctions or malicious threats
- Comprehensive and effective monitoring of geographically dispersed assets

VIDSYS SOLUTION

Vidsys is a rapidly deployable, browser-based platform that collects, correlates and converts vast amounts of data into meaningful and actionable information, based on the organization's risk policy, standards and compliance requirements.

Vidsys software enables decision makers from a single organization or multiple entities – however geographically dispersed – to manage risk in real time. By leveraging mobile and web-based technology, the software can be rapidly deployed and provides real-time situational awareness and information management capabilities to remote users and first responders.

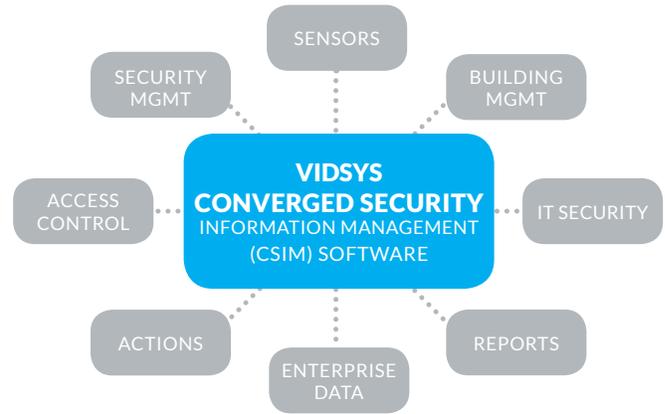

Because Vidsys uses open architecture it can integrate to any system or product. Vidsys software meets all US federal information assurance requirements.

BENEFITS

- Strengthen security and information management
- Manage geographically dispersed assets from a single location
- Improve response times
- Improve collaboration and resource sharing
- Facilitate interoperability – among public agencies and within large organizations
- Integrate to virtually any system
- Reduce operating costs
- Decrease time wasted on false alarms
- Extend technology investment lifecycle

HOLISTIC SECURITY AND RISK MANAGEMENT

- Commercial-off-the-shelf (COTS) software
- Open architecture – integrates any system or product
- Rapidly deployable, browser-based client
- Meets US federal information assurance requirements
- Mobile and Scalable

HOW IT WORKS

The value of implementing Vidsys software platform is to protect government assets by deploying a common operating picture across multiple and disparate security systems, building management systems and information management systems. Vidsys is a proven, effective tool to mitigate risk and enhance compliance while helping organizations achieve efficiencies and improve performance metrics by collecting, analyzing, verifying and resolving multiple security situations.

The rules engine and work flow tools give management the ability to pre-determine what data should be correlated and what should be filtered out. For example, from a video analytics alert, a command center operator can be instantaneously presented with the exact location of the potential security breach and surrounding assets on a map, along with step-by-step instructions for evaluation and resolution. This includes pushing crucial information, in this case, video camera views through the Vidsys mobile interface, to a responding officer. Once the situation is resolved and closed, a reporting feature is capable of generating detailed reports for after action analysis, or as part of a forensic record.
