

Converged Security + Information Management

ENVIRONMENT

Resolving a public safety crisis often depends on successful information sharing and coordination among multiple agencies. Using Vidsys, some of America's largest communities are experiencing enhanced collaboration across multiple public safety and emergency response agencies. The result is faster incident resolution, enhanced situational awareness, and improved forensic capabilities. The scalability of Vidsys software enables rapidly expandable interoperability and collaboration in response to a crisis or in preparation for a major event. Real-time situation management enables real-time response.

SECURITY CHALLENGES:

- Track ongoing vandalism or violence fast enough to apprehend suspects
- Respond quickly to medical emergencies
- Systematically enforce standard concept of operations for incident response
- Monitor social media for predictive policing
- Leverage location based assets to improve response time

VIDSYS SOLUTION

Vidsys is a rapidly deployable, browser-based platform that collects, correlates and converts vast amounts of data into meaningful and actionable information, based on the organization's risk policy, standards and compliance requirements.

Vidsys software enables decision makers from a single organization or multiple entities – however geographically dispersed – to manage risk in real time. By leveraging mobile and web-based technology, the software can be rapidly deployed and provides real-time situational awareness and information management capabilities to remote users and first responders.

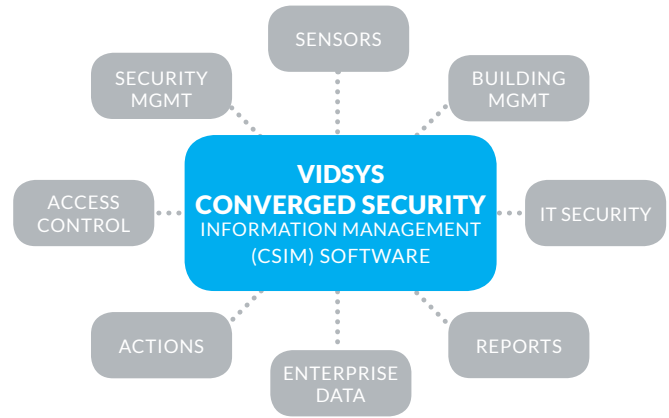

Because Vidsys uses open architecture it can integrate to any system or product. Vidsys software meets all US federal information assurance requirements.

BENEFITS

- Strengthen security
- Manage geographically dispersed assets
- Improve response times
- Enhance collaboration
- Facilitate interoperability
- Integrate to virtually any system
- Decrease false alarms

HOLISTIC SECURITY AND RISK MANAGEMENT

- Commercial-off-the-shelf (COTS) software
- Open architecture – integrates any system or product
- Rapidly deployable, browser-based client
- Meets US federal information assurance requirements
- Mobile and Scalable

HOW IT WORKS

The Vidsys software platform has a rules engine and work flow tools that give end users the ability to pre-determine what data should be correlated and what should be filtered out. For example, from a video analytics alert, a command center operator can be instantaneously presented with the exact location of the potential crime and surrounding security assets on a map, along with step-by-step instructions for evaluation and resolution. This includes pushing crucial information, in this case, video camera views through the Vidsys mobile interface, to a responding officer. Once the situation is resolved and closed, a reporting feature is capable of generating detailed reports for after action analysis, or as part of a forensic record.

In another scenario, if a person with criminal intent is on the run, Vidsys software integrates all the relevant information including video assets and event management for security responders. Alarms are correlated while live and recorded video feeds from the cameras closest to the alarm are automatically displayed. Vidsys software is designed to assist responders in identifying and resolving the situation quickly and efficiently.
